

## Ashna Ali

9516 N Lane Avenue, Kansas City, MO 64157 • [ashna.ali.prof@gmail.com](mailto:ashna.ali.prof@gmail.com) • 816.728.0672

Linkedin: [www.linkedin.com/in/ashna-ali-4a451716b](https://www.linkedin.com/in/ashna-ali-4a451716b) • Portfolio Website: <https://my-portfolio-pi-ashy-83.vercel.app/>

## OBJECTIVE

Post-graduation, I seek full-time opportunities in machine learning/AI or software development to apply and further develop my skills acquired through my education and experience.

## EDUCATION

University of Missouri-Kansas City  
Master of Science in Computer Science

**Expected December 2024**

University of Missouri-Kansas City  
Bachelor of Science in Computer Science

**May 2023**  
University Honors, GPA 3.25

## SKILLS

**Tools** – AWS, MongoDB, Github, Microsoft Teams/Office, Visual Studio Code, Tensorflow, Pytorch, mySQL, Docker, Flask, NodeJS, NextJS, Express, Redux

**Languages** – Java, Python, C++, C#, ReactJS, SQL, Javascript

**Soft Skills** – Problem Solving, Project Management, Troubleshooting, Agile Development, Adaptability

## PROJECTS

### Applied Cryptography (Summer 2024)

- **Project Summary:** Developed a web application with a group of students that demonstrates a hybrid solution of combining Advanced Encryption Standard (AES), Elliptical Curve Cryptography (ECC), and post-quantum cryptography for healthcare data storage.
- **Key Contributions:**
  - Conducted literature review on research done in the healthcare industry using AES, ECC, and Post-Quantum Cryptography for data storage and data transfer.
  - Identified critical challenges in implementing a hybrid solution of AES, ECC, and post-quantum cryptography, allowing valuable insights for future research
  - Led and managed a team in developing a web application that demonstrates a hybrid solution of combining AES, ECC, and post-quantum cryptography for data storage of healthcare data
  - Designed front-end application, making sure it is user-friendly and efficient
- **Skills and Tools:** Docker, Flask, PostgreSQL

### Cloud Computing (Spring 2024)

- **Project Summary:** Developed a web application that takes any ReactJS application from Github, builds it, and then deploys it to the cloud. Project earned first place in a class-based competition based on the submission and recognition from the professor. Project was used as an example for future classes.
- **Key Contributions:**
  - Created a simple yet efficient user interface that has a textbox that takes a link to a Github repository and then sends information to the cloud to start the build process
  - Integrated AWS services (Elastic Container Registry, S3 Storage) for seamless deployment
- **Skills and Tools:** ReactJS, NextJS, AWS Elastic Container Registry, AWS S3 Storage, Express

### Deep Learning (Spring 2024)

- **Project Summary:** Developed custom CNN models for image classification, working with datasets like CIFAR-

10 and Tiny ImageNet.

- **Key Contributions:**
  - Applied knowledge learned in class about optimization, hyper parameter tuning, and transfer learning to improve on accuracy and efficiency.
  - Also explored advanced techniques like segmentation and style transfer
- **Skills and Tools:** Python, Tensorflow, Pytorch, Visual Studio Code

## Software Engineering Capstone (Spring 2023)

- **Project Summary:** Developed a web application to display various job postings for graduate classes to apply as a Graduate Teaching Assistant for the University of Missouri-Kansas City.
- **Key Contributions:**
  - Coordinated a team of four to engineer a Graduate Teaching Assistant application submission portal for the institution.
  - Created two different views of the front-end application (a student and administrative view)
  - Incorporated a user account and login page for the front-end application using Redux for application state management
  - Developed the API configuration for sending and receiving data from the database
  - Planned the database entry structure
- **Skills and Tools:** MongoDB, Express, NodeJS, ReactJS, Redux

## EXPERIENCE

### Missouri Institute of Defense and Energy - UMKC

*Graduate Student Research Assistant*

Kansas City, MO  
**May-August 2023**

- Conducted research on machine learning models (mainly image classification and segmentation) using Tensorflow and Pytorch while assisting fellow graduate/Ph.D students with their projects.

### Oracle Cerner Corporation (Oracle Health)

*Technical Apprentice*

Kansas City, MO  
**May 2019-Nov 2021**

- Learned and applied web development skills and worked on small projects for the Integrated Charting team. Main solution was a web application that tracked patient's symptoms and diagnoses.

*Cerner Scholar*

- Through Northland CAPS, worked with the Clinical Center Development team and learned test automation using Eggplant

Kansas City, MO  
**Apr-May 2019**

### Cobblestone Family Health

*Risk Stratification*

Liberty, MO  
**Oct 2017-Jan 2018**

- Used risk stratification to organize patient records using electronic health system
